Measuring Method Of Characteristics		
11	Capacitance	1) Charging is performed by constant current followed by constant voltage charging. 2) Charging is performed for duration of 30 minutes at rated voltage. 3) Discharge use a constant current load device and measure the time for the terminal voltage to drop from V_1 to V_2 upon discharge at 1mA/F. ($V_1 = 0.8 \times V_R$, $V_2 = 0.4 \times V_R$) 4) The capacitance can be obtained by the following equation. $C = \frac{I \times (T_2 - T_1)}{V_1 - V_2} (F)$  12	ESR	The AC Resistance is used. 1) The Frequency of the measuring voltage shall be 1kHz. 2) The AC current shall be from 1 to 10mA.
13	Leakage current	1) Charging is performed by constant current followed by constant voltage charging 2) Charging is performed for duration of 72 hours at rated voltage. 3) Then, Leakage current is measured by current measurement equipment.
