Measuring Method Of Characteristics

9 Capacitance

- 1) Charging is performed by constant current followed by constant voltage charging
- 2) Charging is performed for duration of 30 minutes at rated voltage.
- 3) Discharge use a constant current load device and measure the time for the terminal voltage to drop from V_1 to V_2 upon discharge at 1mA/F. ($V_1 = 0.8 \times V_R$, $V_2 = 0.4 \times V_R$)
- 4) The capacitance can be obtained by the following equation.

$$C = \frac{I \times (T_2 - T_1)}{V_1 - V_2} \text{ (F)}$$

10 ESR

- The AC Resistance is used.
- 1) The Frequency of the measuring voltage shall be 1kHz.
 - 2) The AC current shall be from 1 to 10mA.

Mounting Recommendations

Maximum torque for M12 screw terminals are 16Nm.
Clean terminals before mounting.

※ Threads Standards

Notation Example) M12 x 1.75

The above M is symbol to mark thread type, 12 means screw diameter (External), and 1.75 means thread pitch.

Thread Type	Symbol	Mark method
M thread (Metric Threads)	M	M12 x 1.75 M size x pitch
